

About the Services to be Offered:

Clara City Telephone is coming to town and hoping to install fiber optic cable to each property in Lambertton. So why is this important or such a big deal? It's not all about faster internet.

Why Fiber?

Traditionally telephone services, cable services and internet services were brought to you via copper coax cable. Coax cable is limited on the amount of service it can carry. Fiber optic cable connections can deliver multiple services such as telephone, video, and internet. Fiber is more efficient and has more capabilities.

What services will be offered?

Clara City Telephone will be offering cable tv - also known as video services, telephone service and high speed internet access. You can choose which services you would like to use. You can even have fiber installed to your property and not use any of their services.

Cable TV/Video Service Upgrade

Clara City Telephone currently provides cable tv services in Lambertton. Service is brought to properties via aerial cables. The system has become outdated. The fiber network being installed will allow the entire cable tv system to be upgraded and will be a more reliable service.

Telephone Service

With the new fiber network, Clara City Telephone will be able to offer telephone service in - Lambertton. You can keep your current 507-752 number and will have access to a variety of calling features.

Internet Service

The internet has been the driving force to have fiber installed to all businesses and homes across the country. You hear the term broadband. Broadband is the term that refers to high-speed internet access. Currently most people in Lambertton get internet service through the existing copper cable network or wirelessly. Both of these systems have become outdated and are unable to provide the high speed internet service people now need. The new fiber optic network will be able to provide the higher speeds that people need.

There are many communities across the country that have been working hard to get this type of network installed. Lambertton is very fortunate to have this type of network installed before some more populated regions of the state and country.

Redundancy

Clara City will be offering a redundant service. What this means is the fiber network will have two ways out of Lambertton to the rest of the world. If for any reason the network's connection to the outside world is disrupted, the network will automatically go out the other way. Making it a redundant system.

The world has become dependent on having reliable service to communicate, to work, and to play. Lambertton will have that.
